ISRO develops 3 cost-effective ventilators, oxygen concentrator

The Indian Space Research Organisation's Vikram Sarabhai Space Centre (VSSC), has developed three different types of ventilators and an oxygen concentrator at a time when a shortage of this critical medical equipment resulted in the deaths of many Covid-19 patients across the country. Based on designs, features and specifications, we have named them, Prana, VaU and Svasta. All three are user-friendly, fully automated and with touch-screen specifications, meeting all safety standards.

Technology transfer will be done for the commercial production of these three ventilators and the one oxygen concentrator by this month itself. Likely to be priced around ₹1 lakh, the ventilators developed by the ISRO were cost-effective and easy to handle compared to the mini conventional ventilators that are currently priced around ₹5 lakh.

About the Prana, VaU, Svasta and Shwaas:

- **Prana** is meant to deliver respiratory gas to the patient by automated compression of an **Ambu bag**, **Svasta** is designed to work without electric power, and the **VaU** is a low-cost ventilator equivalent to commercially available high-end ventilators.
- The **VSSC** has also developed a portable medical oxygen concentrator called **Shwaas**. It is capable of supplying 10 litres of enriched oxygen per minute, adequate for two patients at a time.
- It enhances the oxygen gas content by selectively separating the nitrogen gas from ambient air through **Pressure Swing Adsorption (PSA)** which is commonly used for the production of oxygen from the air.
